

“A bad day in the bush, is better than any good day in the city!” - Unknown

Wildlife management offers a life-changing experience.

The module aims to develop the student's understanding of the natural elements. Students learn about conservation of nature and the natural resources. They learn how to apply basic conservation principles to various wildlife operations. Students of different lines of study are given the opportunity to work together in a remote environment. Students who choose this module, have a passion and great interest in wildlife and conservation.

This module consists of lectures, PBL, workshops and excursions that all focus on the Wildlife industry mainly in South Africa. It further investigates conservation practices from around the world. They are also required to complete a module assignment where they will need to write a management plan for starting up a new game reserve.

About This Module

- This module is about offering you the chance to experience and learn about various aspects of the wildlife industry.
- Learning about conservation principles which could be implemented in each individuals' daily life.
- Developing social skills by living and working together with other students in a remote environment.
- Obtaining a good understanding about the use of technology and social media in conservation and wildlife management.
- Developing or igniting a passion for the environment that could be implemented in future careers.

Examination

During the module you will be assessed by means of individual participation.

You are required to complete various individual and group assignments during the module which focuses on the new knowledge gained from workshops, lectures and practicals. Furthermore, there will be a mid-module test consisting of short questions and an end module test (open questions) and a module assignment.

The module assignment consists of two parts, a presentation and a written management plan which is done in groups
